PROFESSIONAL SUMMARY

Full stack software engineer with 4+ years of experience building enterprise and consumer web, mobile, and AI products, including FinTech platforms. Takes products from early idea to launch, working directly with clients and stakeholders to turn business goals into clear plans and reliable software. Strongest in backend systems, cloud platforms, and applied AI.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Golang, Java, Python, SQL

Frameworks & Libraries: React, Next.js, React Native, Node.js, Express.js, NestJS, FastAPI, Prisma, LangChain, LangGraph

Media & Streaming: HLS, Adaptive Bitrate Streaming (ABR), FFmpeg, S3 Multipart Upload, CDN Delivery

Cloud & DevOps: AWS (ECS, EC2, S3, CloudFront, MediaConvert, Rekognition, Cognito, SQS, RDS, ElastiCache, CloudWatch, IAM), Docker, Terraform, Jenkins, GitHub Actions, CI/CD

AI / ML: Retrieval-Augmented Generation (RAG), NLP, LLM Agents, Multi-Agent Systems, Natural-Language-to-SQL, OpenAI API, Prompt Engineering, AI Automation, Automated Content Moderation

Databases: PostgreSQL, PostGIS, MongoDB, ScyllaDB, Redis, Milvus (Vector Database)

Architecture & Practices: System Design, Modular Monolith Architecture, Distributed Systems, Event-Driven Architecture, Message Queues (SQS), WebSockets, REST APIs, Load Testing (k6), Performance Engineering, Unit & Integration Testing, GDPR Compliance, Agile

Tools: Git, GitHub, Jira, ClickUp, Jest

PROFESSIONAL EXPERIENCE

Software Engineer & Technical Consultant | Bitrupt **Dec 2025 - Present**

- Lead backend development and system architecture for client products, including the Follow social video platform.
- Engineer scalable cross-platform mobile applications using React Native alongside backend-heavy full-stack architectures.
- Design and implement AI-powered agentic solutions, automation workflows, and API-driven systems for diverse client needs.
- Partner directly with clients to gather requirements, define technical roadmaps, and deliver business-focused solutions across multiple projects.
- Run load testing and performance tuning to keep production systems reliable as usage grows.

Full Stack Developer | IANCON **Jun 2022 - Dec 2025**

- Developed full stack dashboards and applications for B2B clients, primarily in FinTech and maritime logistics, including the Shipfacet AI platform.
- Built AI features including multi-agent workflows and retrieval-augmented generation (RAG) using Python, FastAPI, and LangGraph.
- Integrated role-based access control (RBAC), payment gateways, and AI-powered automation workflows.
- Collaborated with clients to refine requirements and deliver tailored, production-ready solutions.

KEY PROJECTS

- **Follow (Video-First Social Media Platform):** Independently designed and built the personalization and recommendation engine that ranks each user's feed from their interests and activity. Proposed the overall system architecture on NestJS, TypeScript, PostgreSQL, Redis, and AWS across 11 independently scaled services. Built the video upload and adaptive bitrate streaming pipeline with S3 multipart upload, AWS MediaConvert, HLS, and CloudFront, bringing buffer times under 50ms, with AWS Rekognition screening explicit content before publish. Ran the production load test that validated the platform at 10,000 concurrent users with a 0.05% error rate, and cut feed response time 9x by fixing a caching and connection-pooling bottleneck.
- **Membership Sales Coach:** Built an AI sales-training platform with two modes. In coach mode, users learn by asking questions against a Retrieval-Augmented Generation (RAG) knowledge base of sales methodology, with source-grounded answers, citations, and hallucination guardrails. In practice mode, users role-play live sales calls against AI buyer personas set to different difficulty levels, and every conversation is scored at the end across individual sales competencies so users can see exactly where they need to improve. Added PII redaction to keep customer data out of the model, and contextual summarization that cut LLM token usage and API cost by roughly 40% per conversation.

- **Shipfacet (AI Maritime Operations Platform):** Developed a B2B multi-agent decision-support platform that helps ship operators and chartering teams with voyage intelligence, vessel valuation, charter-party analysis, demurrage calculations, risk assessment, and emergency response guidance. Implemented LangGraph supervisor orchestration on Python and FastAPI, RAG workflows with Milvus vector search and source citations, guarded natural-language-to-SQL valuation, deterministic risk calculations, and a React and TypeScript streaming chat interface.

EDUCATION

- BS in Computer Science (BSCS), University of Karachi (UBIT) Jan 2022 - Dec 2025

CERTIFICATIONS & ACHIEVEMENTS

- Certificate in Chatbot Development, Microsoft Learn Student Ambassadors (MLSA), awarded for building an intelligent chatbot using Dialogflow.
- Competitive chess player, applying strategic thinking and structured problem-solving.
